

HB 1078 -- SEXUALLY VIOLENT OFFENDERS

SPONSOR: Kelley

This bill specifies that an individual convicted of their first sexually violent offense may be required to undergo medroxyprogesterone acetate treatment or treatment using another approved pharmaceutical agent as a part of any condition of release. If the individual is convicted of a second or subsequent sexually violent offense, the person will be required to undergo the treatment as a condition of release. If the court determines, after an appropriate assessment, that the treatment would not be effective or if the individual voluntarily undergoes a permanent surgical alternative approved by the court the treatment will not be required.
